View My Add-ons

✓ Acquired

### 1 Download your Add-on

Download your Add-on using the button below, to download the file to your computer's downloads folder.

Enter any passwords, or accept any notices your computers operating system presents.

Download Retouching Panel

### 2 Install your Add-on with Extension Manager

Open Extension manager CS6. If you don't have it on your computer, you can download it from here

[Download Extension Manager >](#)

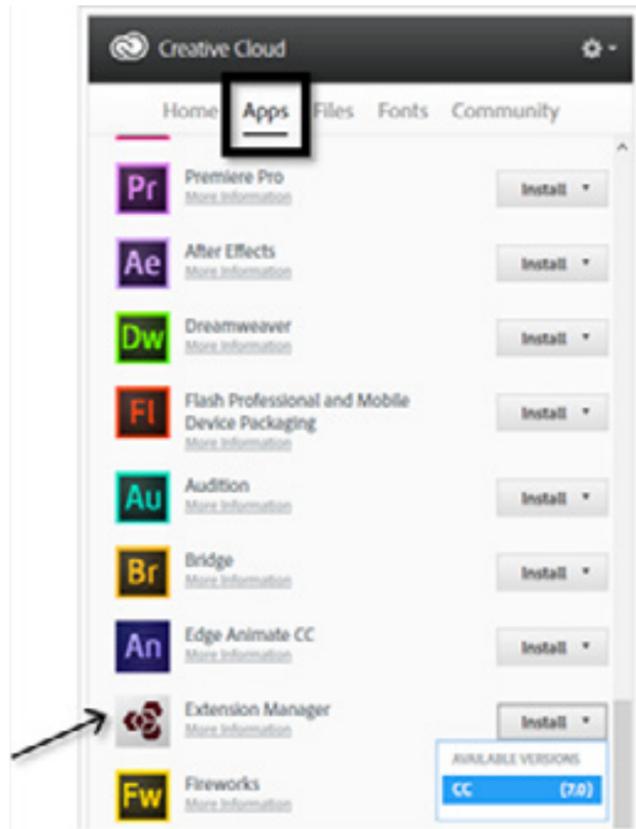

Install your Add-on by selecting File > Install extension and selecting the Add-on from within your computer's download folder.

The product, which you have bought through Adobe, will automatically be installed to your Photoshop program, which is saved in your Adobe account. If it's not automatically installed, go to the product's webpage ([You can reach the product page by clicking here](#)) and click the 'View My Add-Ons' button or you could click the following link; [https://creative.adobe.com/addons/my\\_addons](https://creative.adobe.com/addons/my_addons). After clicking the 'Install' button that appears, you will see the 'Download Beauty Retouching Kit' button.

When you make the purchase from [Photoshop-Store.Com](#), both after the purchase is complete and from your e-mail you may reach the download button.

If you lose the file and can't reach the download link, you'll receive another link by sending us the receipt.

# How can I install the add-on?

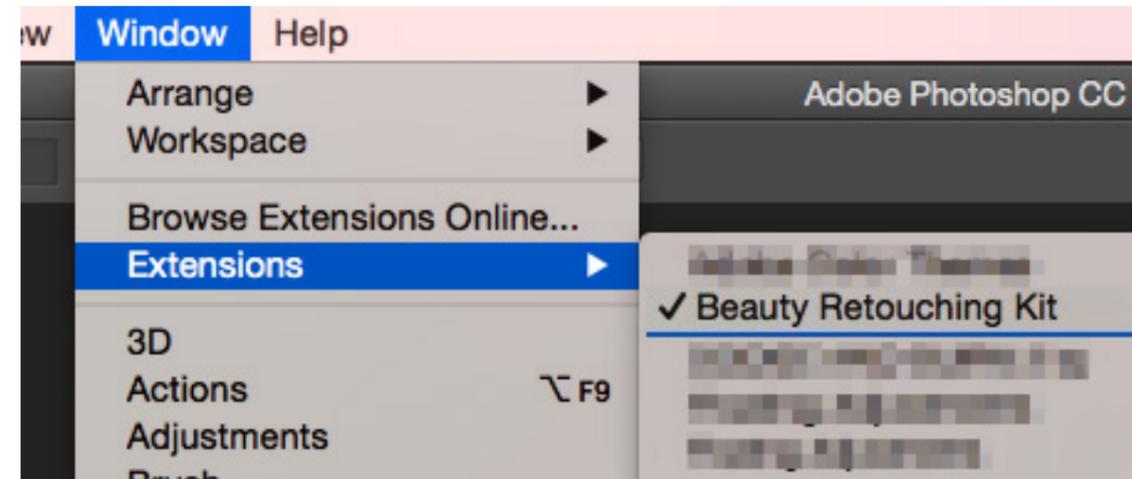

Primarily you should have Adobe Extension Manager installed on your computer.

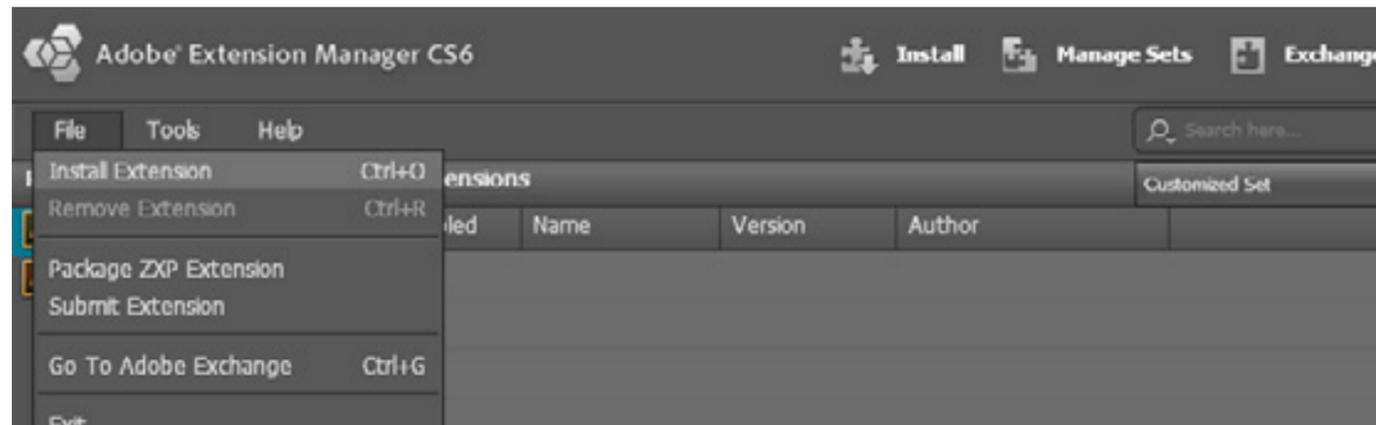

If you don't have Adobe Extension Manager installed, you can download it from your Creative Cloud application or the links below.

CC; [http://www.adobe.com/exchange/em\\_download/](http://www.adobe.com/exchange/em_download/)  
CS6; [https://www.adobe.com/exchange/em\\_download/em6](https://www.adobe.com/exchange/em_download/em6)

If you receive “**Manifest.xml is not found**” error, remove the Extension Manager, download from the links to the left and reinstall it.

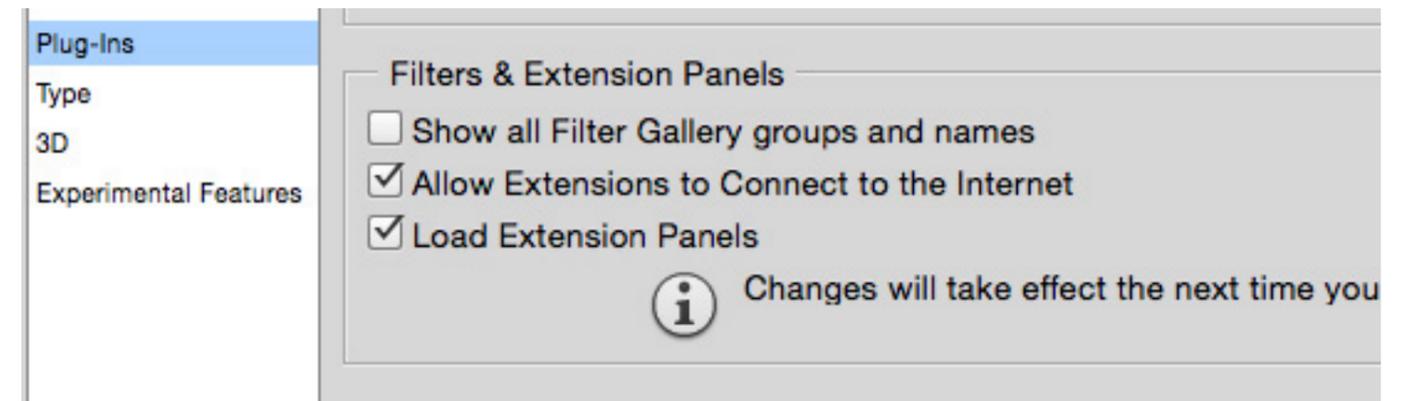

After the installation is finished you can find the panel in **Photoshop / Window / Extensions** section.

Open Extension Manager as you see above in the photo and click the 'Install Extensions' button. (Keyboard Shortcut: CTRL + Q)

Then choose the 'BeautyRetouchingKit.zxp' file, which you have downloaded and click the confirmation buttons that appear.

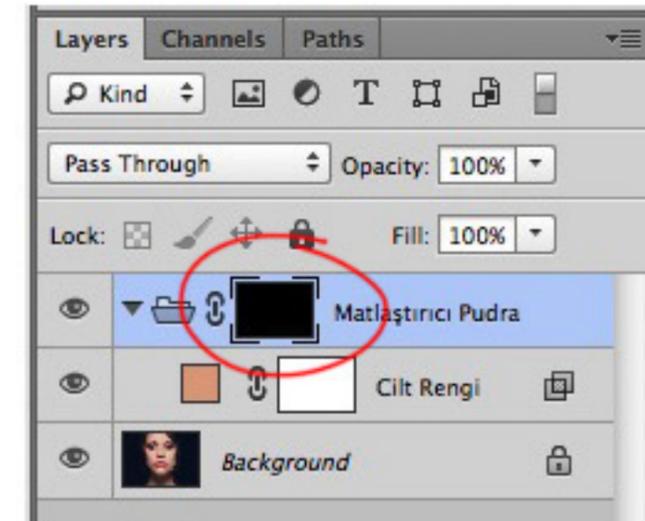

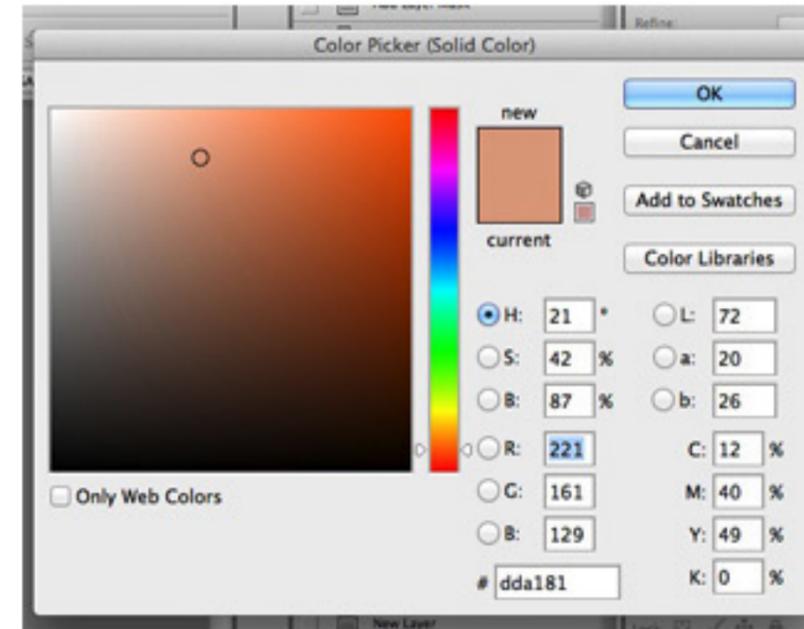

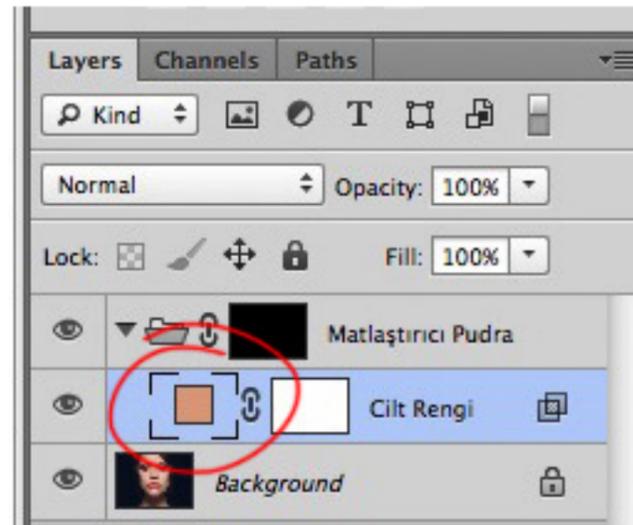

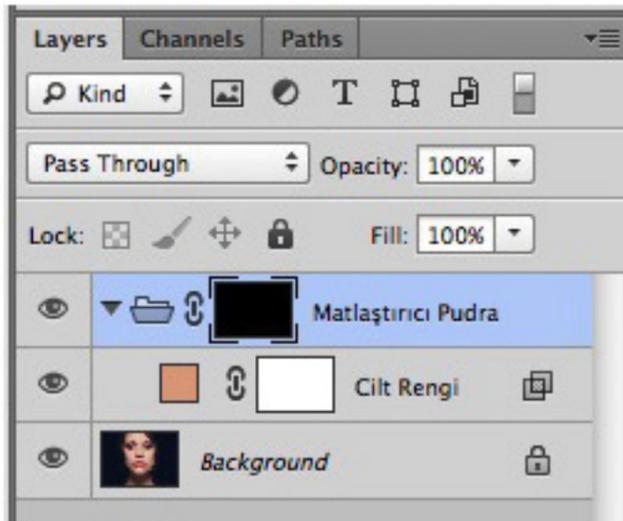

If the Extensions section is closed, go to **Photoshop / Settings / Plug-ins** settings and activate the buttons above.

# Directions For Use

# Mattifier Powder

Please must read this section.

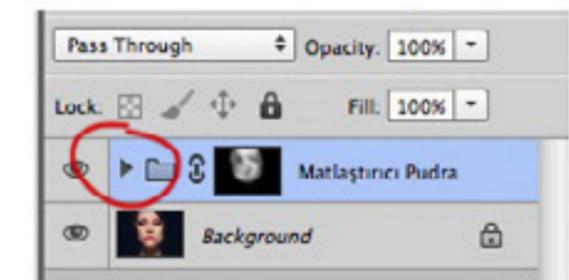

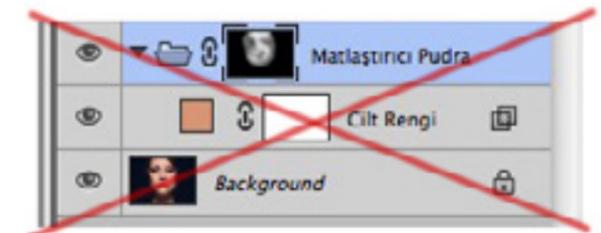

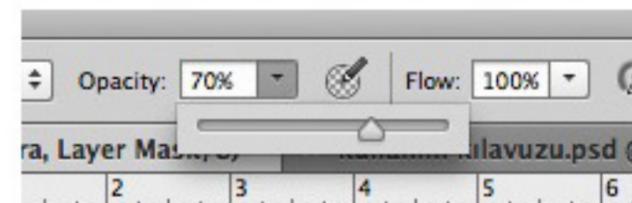

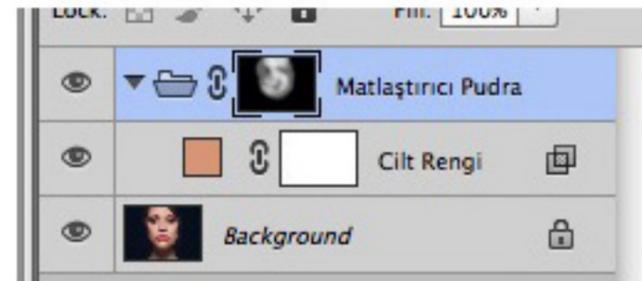

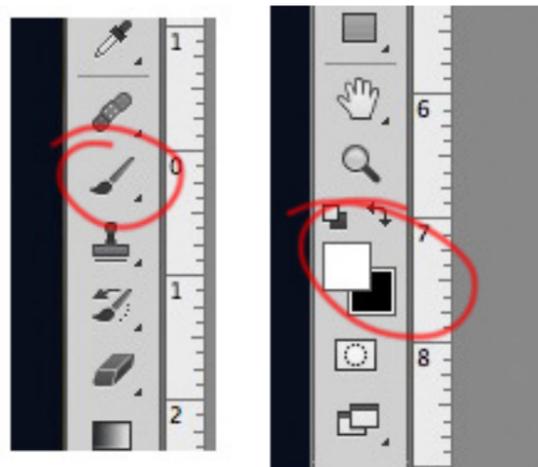

1 After applying Mattifier Powder the layers that you see in the picture will be open in the layers windows.

2 When you double click on the marked area, you will see the panel where you select the skin color.

3 When you click on the any part on the face, the color code above will change. After you make sure that you get the right color click on the Ok button.

4 To start the masking process click on the square icon marked with a red circle. When you see a frame on the square it means that it is selected.

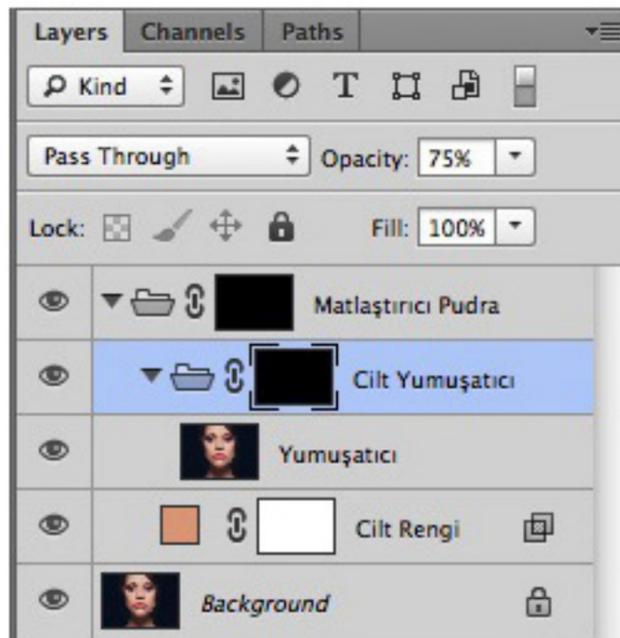

5 Then select the brush tool when you make sure that there is white square above and the black one below, paint the area that you want to apply on.

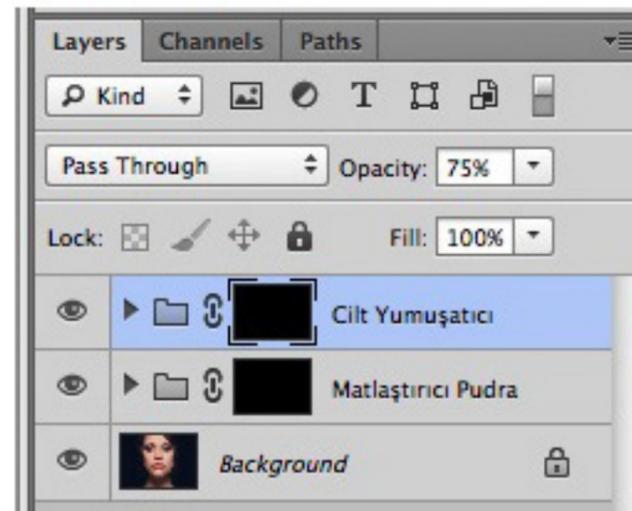

6 The window you see above will change when you start to paint.

7 Adjusting your opacity rates will make you get better results.

8 Before you apply the next plug-in make sure exactly that the group is closed. To close the group click on the triangle button marked with a red circle.

**9** If you apply the plug-in without closing the group, it will integrate each other as you can see above. In this case plug-in does not work correctly. If you confront this problem by mistake, drag the last creating folder to recycle bin and close the page. And then re-apply the plug-in.

**10** After you applying a second plug-in the appearance of the layers windows should be like the one above.

Brush the freckled and stained areas with white brush as above. If there's a roughened view as below, decrease the opacity of "Details 1px" or click the eye near it and close it.

**Important note:** No Photoshop plug-in can remove defects such as big and deep scars, deep wrinkles and moles. Therefore, before applying the plug-in it is better you make a general cleaning with healing brush.

After

Before

**'Skin softener'** blurs the skin even if it's just a little bit, but it never removes the texture like Photoshop's standard blurring tools.

**Ultra Smooth Skin** is closer to the make-up style of porcelain. More texture is lost with it.

\* We recommend you use these tools with low opacity.

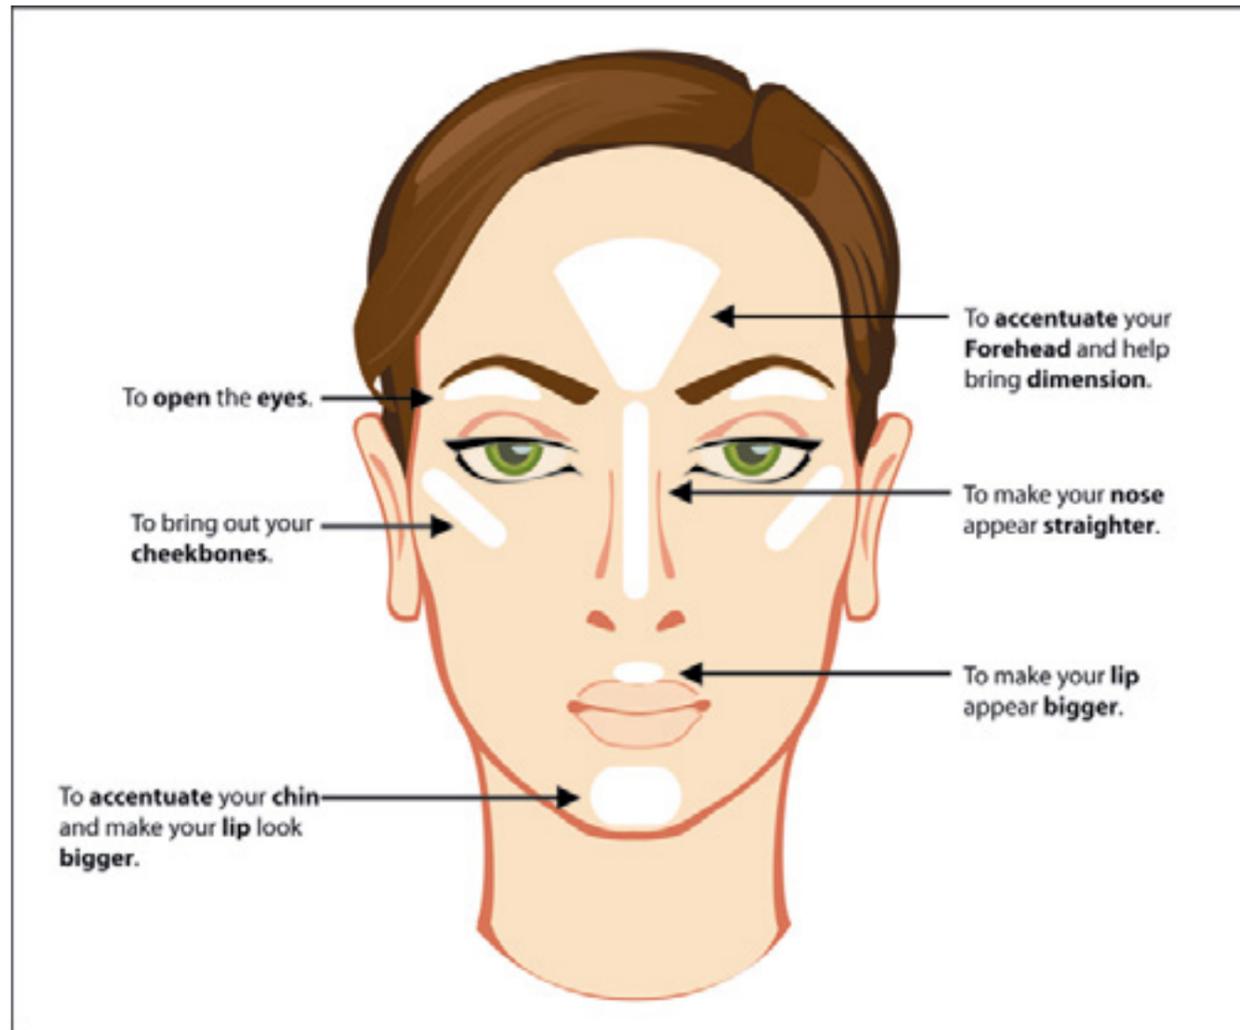

After

Before

**\*Perfect Skin Pro:** It does what 'Mattifier Powder', 'Freckle and Stain Reducer' and 'Skin Softener' tools do altogether. This way it gives the advantage of brushing/masking for once.

Unfortunately the disadvantage of Perfect Skin Pro is that it works slowly, when used on a low-capacity computer.

**\* This tool is special for Retouching Panel customers. It's not found in the Beauty Retouching Kit.**

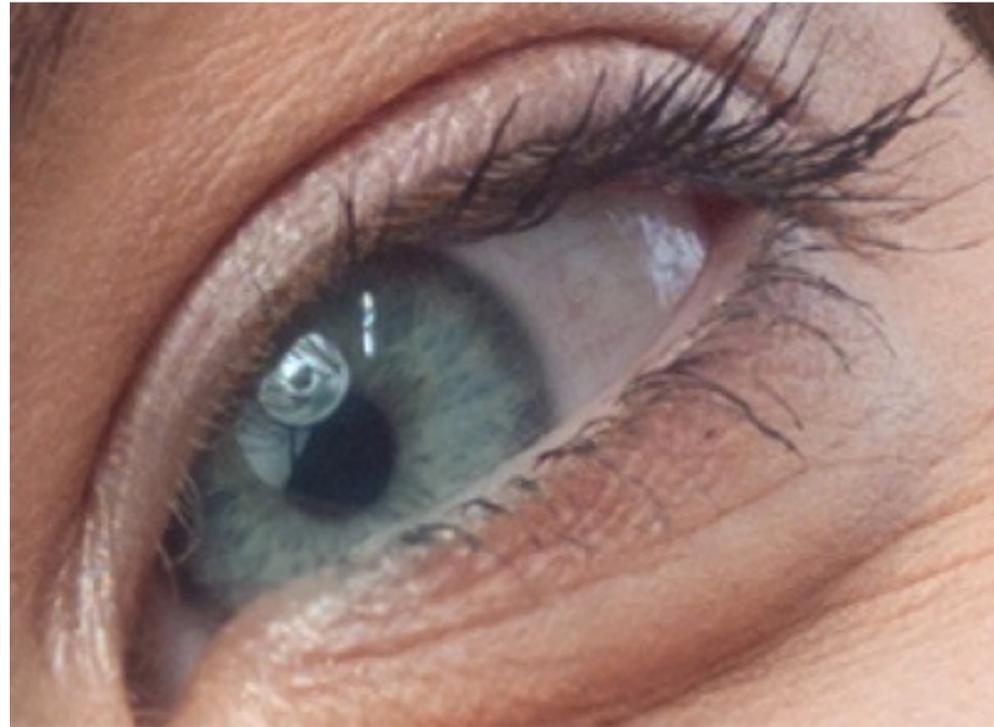

We recommend, you use this tool with %30 opacity on the areas shown above.

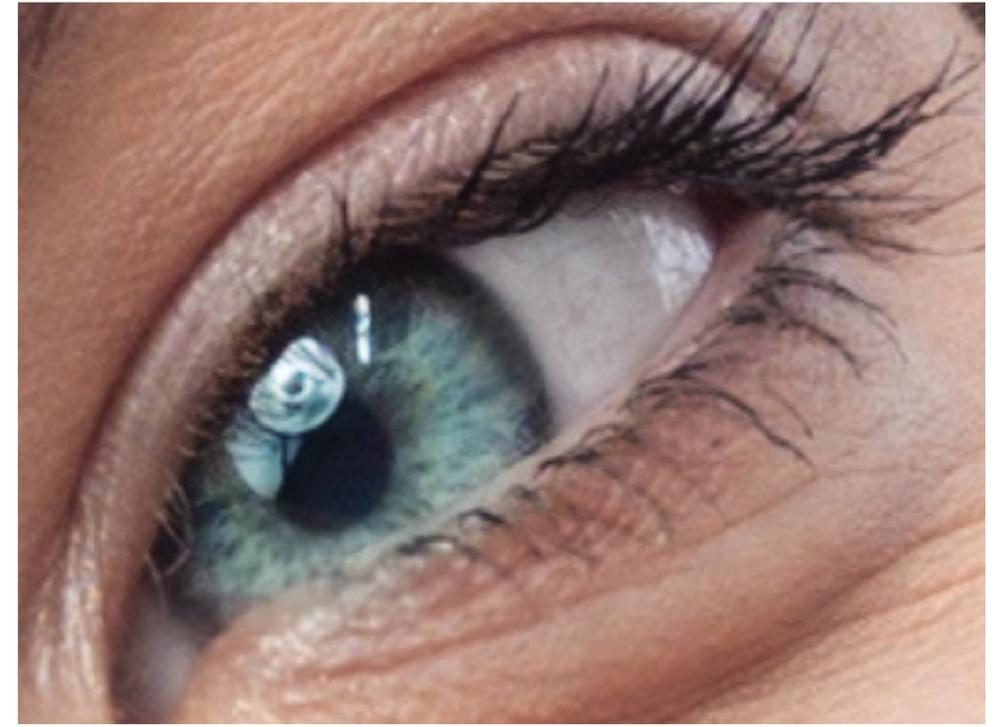

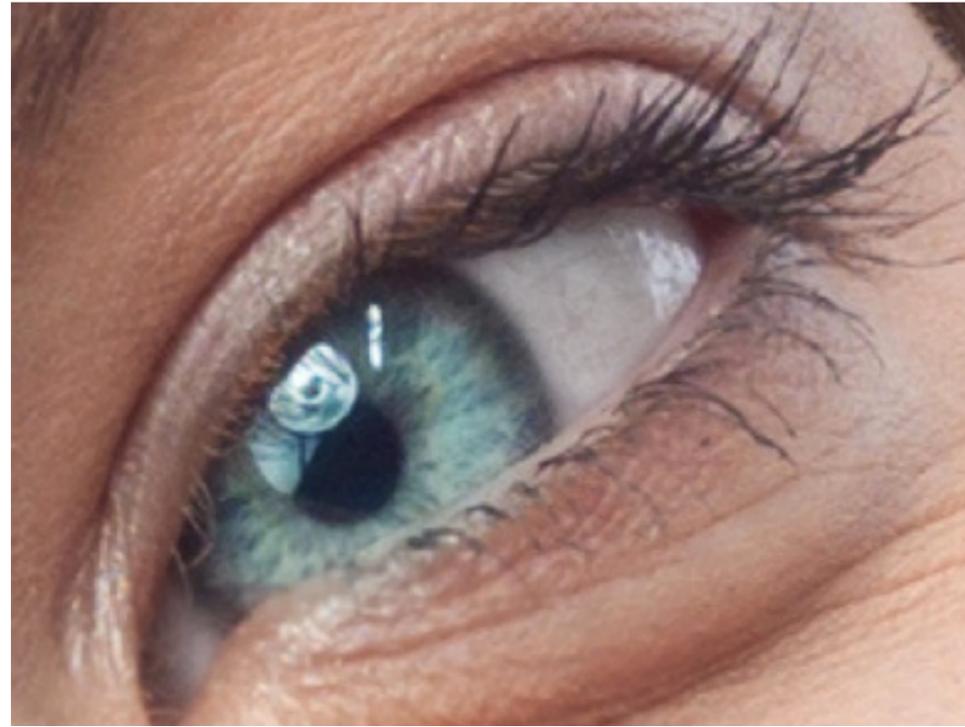

After

Before

If the skin is darker than the whole photo, brush the skin with %30 opacity.

Before

After

Brush the white parts of the eye, after choosing the 'Whites' layer with white brush.

Brush the iris part of the eye after choosing the 'Iris' layer with white brush.

After applying the mascara tool, brush the above of the eyelashes with white brush.

The mascara tool is not effective on other areas of the skin. That is why it won't be a problem if you miss the eyelash while brushing.

**Eye Shadow;** strengthens the expression in the eyes. Apply it to eyelids with a low opacity brush from bottom to top. Applying it more to the lower areas and less to the upper areas will give it a more natural look.

You can also apply this to the eyebrows and have a stronger look for them

**Sharpen 2px, Sharpen 4px and Detail Enhancer** brings the details in your photo to the foreground. fotoğrafınızdaki detayları ön plana çıkarmanızı sağlar.

Sharpen 2px brings tinier details,  
Sharpen 4px brings medium sized details,  
Detail Enhancer brings bigger details to the foreground.

Pay attention to the opacity value while using these tools. For example, if you use Sharpen 2px with high opacity, your photo might look rougher than you wish.

Before

After

**Blusher** is for applying red powder to the cheeks.

Before

After

**Redness Reducer**, Redness Reducer provides the opposite feature of '**Blusher**'. Especially the photos taken in studios, some parts of the face might look redder than they are supposed to. With this tool you can remove the unwanted redness.

Before

After

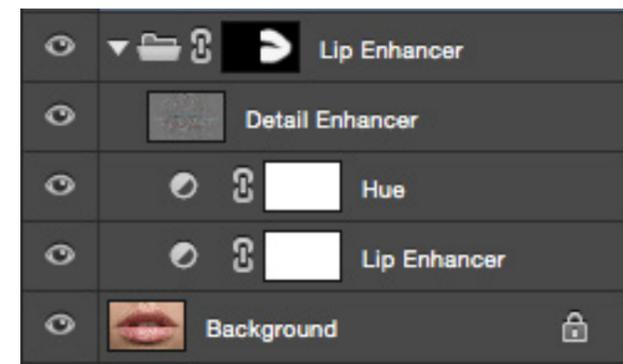

You can acquire crisper and clearer lips with Lip Enhancer.

You can brush only the lips with white brush that has %30-50 opacity.

Before

After

If you wish, you can click the 'Hue' layer and change the color of the lip as you wish. Besides, the naturalness won't spoil at all.
