

byLFC\_indesign scripts

When download is done, you'll get a **zip** file in the folder you choose to save it. **Unzip it** to find the **jsx/jsxbin**. Then start you InDesign and open the **Scripts Palette** (found under the **Window > Utilities > Scripts**). With **Scripts Palette** opened, right-click (or control-click, in Mac) the **User folder** and select to **Reveal in Finder** (Mac) or **Reveal in Explorer** (Windows). With **User folder** showing in Finder/Explorer, go inside the **Scripts Panel folder** and drag and drop (or copy/paste) the downloaded **jsx/jsxbin** file from original folder\zip file. Go back to InDesign click to **expand the User folder**. The script has now been installed into this folder.
